Factsheet

Intrinsic Value CORE Portfolio Fundamental

25.45% 4Y CAGR

High Volatility

Long Term

Undervalued Quality Companies|| Holding Period: 2+ years || capital> 4 lacs

Portfolio Type	Constituents	Asset Class	Launch Date
Fundamental Model	Indian Stocks & ETFs	Multi-Asset	February 17, 2022

Portfolio Rationale

1. Out of favor sectors are selected based on Market cycles.
2. 3 dimensional ranking is performed and top 3 stocks are selected
3. Minimum Intrinsic value of the stocks is calculated.
4. Top Stocks are bought at their Minimum Intrinsic Value.
5. Hold till market cycle reverses, Sector performs.
6. Exit near Maximum intrinsic value.
7. Average holding per stock is 2.5 years. The portfolio will be rebalanced as per need basis.
8. Preferred amount to invest should be atleast 4-5 lacs over the year.

Rebalance Schedule

Rebalance Frequency	Last Rebalance Date	Next Rebalance Date
Need Basis	June 28, 2026	To Be Decided

Definitions and Disclosures

CAGR

CAGR (compounded annual growth rate) is a useful measure of growth or performance of a portfolio. Every year returns generated by a portfolio are different. Let's say if a portfolio is live for 3 years and returns generated by the portfolio are 5%, 15% & -7%, respectively in the first, second and third year. Then we calculate CAGR as a return number that would give the same terminal investment value at the end of three years, as we get when the portfolio gains by 5% & 15% in the first two years and drops by 7% in the third year. The CAGR in this case would be 3.94%. This means that you will always end up with the same investment value at the end of the third year, if your portfolio gains by 3.94% every year or 5%, 15% and -7%, respectively in the first, second and third year.

In simple words, it indicates the annual return generated by the portfolio from the date of launch. For portfolios live for less than 1 year, absolute returns in the applicable time period are shown. Only live data is considered for all calculations. Returns and CAGR numbers don't include backtested data.

Volatility Label

Changes in stock/ETF prices on a daily basis result in fluctuations to the investment value of your portfolio. In order to help investors understand the extent of fluctuation they might observe with their portfolio investment, every portfolio is categorized into one of the three volatility buckets - High, Medium and Low Volatility. This is done by comparing the portfolio's volatility against that of the Nifty 100 Index.

If the daily change in the investment value of a portfolio is too drastic, it means prices of stock/ETF in the portfolio are changing very rapidly. Such portfolios have High Volatility. Investing in High Volatility portfolios means that changes in your investment values can be very sudden and drastic, whereas fluctuations in the investment value of Low Volatility portfolios are expected to be lower in comparison.

For more information about how volatility is calculated, please check [here](#).

Investment Horizon

For each portfolio, the manager provides a recommended investment time duration to realise the best returns for the portfolio. Each portfolio has one of the following recommended investment horizon:

- Short Term: For portfolios with recommended investment duration of <1 year
- Medium Term: For portfolios with recommended investment duration of 1-3 years
- Long Term: For portfolios with recommended investment duration of >3 years

Asset Class

The specific constituents of each Stock/ETF portfolio are selected from a universe defined by the managers. This constituent universe is labelled as Asset Class.

- If the asset class is **Equity Large Cap**, then all underlying portfolio constituents are selected from the Large Cap segment representing top 100 companies by market capitalisation listed on the NSE (National Stock Exchange of India)
- If the asset class is **Equity Mid Cap**, then all underlying portfolio constituents are selected from the Mid Cap segment representing the companies ranked 101 to 250 by market capitalisation listed on the NSE (National Stock Exchange of India)
- If the asset class is **Equity Large & Mid Cap**, then all underlying portfolio constituents are selected from the Large & Mid Cap segment representing the top 250 companies by market capitalisation listed on the NSE (National Stock Exchange of India)
- If the asset class is **Equity Small Cap**, then all underlying portfolio constituents are selected from the Small Cap segment representing the companies ranked greater than 251 by market capitalisation listed on the NSE (National Stock Exchange of India)
- If the asset class is **Equity Mid & Small Cap**, then all underlying portfolio constituents are selected from the Mid & Small Cap segment representing the companies ranked greater than 100 by market capitalisation listed on the NSE (National Stock Exchange of India)
- If the asset class is **Equity Multi Cap**, then all the underlying portfolio constituents are selected from Multi Cap segment which may include companies from more than two of the Large Cap, Mid Cap, Small Cap categories as described above
- If the asset class is **Debt**, then all the underlying portfolio constituents are Debt instruments
- If the asset class is **Commodity**, then all the underlying portfolio constituents are Commodity instruments
- If the asset class is **Commodity and Debt**, then all the underlying portfolio constituents are either Debt or Commodity instruments
- If the asset class is **Multi-Asset**, then the underlying portfolio constituents comprise a mix of Equity, Gold, Silver, Commodity, Debt or REIT/InvIT constituents

Rebalance

Rebalancing is the process of periodically reviewing and updating the constituents of a portfolio. This is done to ensure that constituents in the portfolio continue to reflect the underlying theme or strategy.

Categorisation of portfolio constituents

All portfolio constituents fall in one of the below categories:

- Large Cap
- Mid Cap
- Small Cap
- Multicap ETFs
- Debt
- Gold
- Silver
- Commodity
- REITs/InvITs

All the stocks listed on NSE(National Stock Exchange) are arranged in decreasing order of Market Cap, so that the stock with the largest market cap gets 1st Rank. Stocks ranked equal to or below 100 are categorized as Large Cap. Stocks ranked below or equal to 250, but ranked above 100 are categorized as Mid Cap stocks. Stocks ranked higher than 250 are categorized as smallcap.

Holdings Distribution

All constituents belonging to a portfolio are categorised under different segments.

Weightage of a segment is calculated as the sum of weights of all constituents belonging to that segment. Suppose 4 constituents, with each having a weight of 10%, belong to the Large Cap segment. Then the weight of the Large Cap segment in the portfolio will be 40% (4*10%).

If the manager has not prescribed any weights, equal weights are assumed for calculations.

Comparison of live performance

To help investors make informed decisions, CASE Platforms provides many tools. One of the tools provided on the platform is the comparison of the live performance of the portfolio. This comparison is a tool to communicate factual & verifiable returns on behalf of the portfolio creator. It should not be considered as an advertisement, promotion or claim. The performance data presented herein has been validated by an independent CA (chartered accountant), in line with SEBI guidelines around showcasing such performance.

The performance data presented herein are not verified by the Past Risk and Return Verification Agency (PaRRVA) or any other agency recognized by SEBI for this purpose. The performance data presented herein may not be comparable to performance data of any other IA/ RA providing such services. Computation of the performance may vary across the industry. Users are requested to apply their due diligence before making investment decisions on the basis of the given past performance data. Past performance is no guarantee of future results. Investment in securities is subject to market risk. Registration with SEBI or enlistment with administration and supervisory body is not a guarantee or assurance of future returns.

The following methodology is used to provide users different options to compare the performance of the portfolios:

- All portfolios are provided with an option to compare the live performance against multiple indexes, which are the following:
 - Equity (Nifty 50)
 - Equity Large Cap (Nifty 100)
 - Equity Mid Cap (Nifty Midcap 150)
 - Equity Small Cap (Nifty Smallcap 100)
 - Equity Large & Mid Cap (Nifty Large & Midcap 250)
 - Equity Mid & Small Cap (Nifty Mid & Smallcap 400)
 - Equity Multi Cap (Nifty 500)
- All portfolios live for >3 years are also provided with an option to compare the live performance against returns generated by Bank FDs, Inflation and Equity asset class
 - FD returns are calculated using the data available from [RBI](#). The annual data for 1-3 years deposit rates is considered. This data is used to compute a daily index series, where the annual returns of the series correspond to the annual deposit rates provided by RBI. For instance, if the annual deposit rates for year 1 is 6% and year 2 is 7%, the total return of the series after 2 years is calculated as $1^{*}(1+6\%)*(1+7\%) - 1 = 13\%$. This series is also utilised to determine the CAGR between any 2 specified dates
 - Inflation returns are calculated using the data available from [IMF](#). The annual percent change in average consumer prices is considered. This data is used to compute a daily index series, where the annual returns of the series correspond to the annual inflation rates provided by the IMF. For instance, if the annual inflation rates for year 1 is 6% and year 2 is 7%, the total return of the series after 2 years is calculated as $1^{*}(1+6\%)*(1+7\%) - 1 = 13\%$. This series is also utilised to determine the CAGR between any 2 specified date

General Investment Disclosure

All the information (including charts, ratios and performance) are provided only for the portfolios created by SEBI registered entities authorized to do so. The Company, on its own, does not make any claim of performance/returns for such portfolios. The company only provides tools to these SEBI registered entities for performance calculation of their recommendations based on this [Returns Calculation Methodology](#).

All services with respect to research and recommendations are provided by the respective SEBI registered entities. Charts and performance numbers on the platform do not include any backtested data. The performance data presented herein has been validated by an independent CA (chartered accountant), in line with SEBI guidelines around showcasing such performance.

The performance data presented herein are not verified by Past Risk and Return Verification Agency (PaRRVA) or any other agency recognized by SEBI for this purpose. The performance data presented herein may not be comparable to performance data of any other IA/ RA providing such services. Computation of the performance may vary across the industry. Users are requested to apply their due diligence before making investment decisions on the basis of the given past performance data. Past performance is no guarantee of future results. Investment in securities is subject to market risk. Registration with SEBI or enlistment with administration and supervisory body is not a guarantee or assurance of future returns.

Read all the related documents carefully before investing. Investors should consider consulting their financial advisor while considering any investment decisions.

Risk Disclosure

Please note that investing in securities involves various types of risks that may impact investments. Key risks that can affect all asset classes inter alia include changes in:

- Market volatility
- General market conditions
- Trading volumes/liquidity and settlement periods
- Interest rates
- Rate of inflation
- Domestic and/or global political, economic and financial developments
- Policies and/or legal and regulatory frameworks by government and other appropriate authorities

Asset class-specific risks inter alia include:

a. **Risks related to Equity and Equity Linked Investments (ELIs) include:**

- Equity shares and equity related instruments are volatile and prone to price fluctuations on a daily basis. The price of securities may be affected by factors, such as price and trading volume volatility, currency exchange rates, company specific news and rumours, etc. Midcap and smallcap stocks generally exhibit higher volatility compared to largecap stocks.

b. **Risk related to investment in Debts, Bonds and Money Market Instruments**

- **Interest Rate Risk:** Changes in interest rates may affect valuation of securities, as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than prices of short-term securities.
- **Credit Risk:** Credit risk refers to the risk that an issuer of a fixed income security may default or be unable to make timely principal and interest payments on the security. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default.
- **Liquidity Risk:** The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid.

c. **Risk related to exposure to Equities, Debt and Commodity through Exchange Traded Funds (ETFs)**

- **Sector/Index Risk:** ETFs that track specific sectors or indices are exposed to concentration risks. Adverse performance in those sectors or indexes can significantly impact returns.
- **Tracking Errors:** While ETFs aim to mirror their benchmark, they may not perfectly track the concerned benchmark, leading to performance deviations due to factors like expenses or liquidity constraints of the underlying constituents of the ETF.
- **Liquidity Risk:** In volatile markets, liquidity for certain ETFs may be low, making it harder to buy or sell units without affecting the price significantly.

d. **Risk related to Commodity related Instruments**

- Risk related to commodity (including gold and silver) related instruments are affected by several factors. The price of a commodity may be affected by factors including its demand-supply dynamics in domestic and global markets, restrictions on the movement/trade of the commodity in domestic and global markets, Indian and foreign exchange rates, large scale transactions in the commodity by governments, central banks and other major institutions, etc.

e. **Risk related to investments in Real Estate Investment Trusts (REITs) and Infrastructure Investment Trusts (InvITs)**

- **Sector Risk:** Changes in the real estate and infrastructure sector including changes in applicable laws and regulations can affect the price and volatility of securities/instruments of REITs and InvITs.
- **Interest Rate Risk:** REITs/InvITs usually secure loans at the trust level and subsequently distribute the amount among the underlying special purpose vehicles (SPVs). In case of a rising interest rate environment, debt payment increases for the trust and adversely impacts the cash flow for unitholders. This in turn reduces cash flow-based valuations of REITs/InvITs.
- **Credit Risk:** Credit risk refers to the risk that an issuer of a REIT/InvIT security/instrument may default on interest payment or even on paying back the principal amount on maturity. Further, valuations may be affected by change in the credit rating assigned to the REIT/InvIT and their SPVs by credit rating agencies.
- **Asset Transfer/Acquisition Risk:** The valuation of REITs/InvITs heavily depend on the underlying assets held by the trust. There is a risk that the transfer or acquisition of these assets, which often relies on sponsors/management commitments, may not materialise as planned. If the assets are not transferred or acquired, the valuation of the trust and future cash flows may be significantly impacted.
- **Risk of lower than expected Distributions:** The distribution by a REIT/InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/InvIT receives as dividends or the interest and principal payments from portfolio assets.

In the light of the risks involved, you should transact in securities only after understanding the associated risks. Please consider and assess all risk factors and your risk tolerance before making investment decisions.

Manager Disclosure

Nikhil Gangil is registered with SEBI with INH000009047 as the SEBI registration number. The registered office address of Nikhil Gangil is Floor No. 3, Office No. 106, Mont vert Spectra Block Sector Opp. Hotel Wadeshwar, Baner, Pimpri Chinchwad, Pune, Maharashtra, 411045. The manager is a member of BSE with Membership Number 5512.
